1 Read and write synonyms for the words in bold. Use the words in the box.

Edward de Bono **proposes** that a PMI (Plus, Minus, Interesting) can **develop** decision-making skills. A PMI checks that an **activity** is worth doing. **Begin** by drawing a table with three columns. **Record** the positive effects of the action in the 'Plus' column and the negative effects in the 'Minus' column. Other points go in the 'Interesting' column. Finally, **award** the points a positive or negative score and add them up. A higher positive **total** shows that the action **ought to** be taken and a higher negative total shows that it shouldn't be taken. Below, is a PMI which an Egyptian family used to decide whether to go to Ireland for a holiday.
