

# Trigonometría – Resumen de fórmulas

## Razones trigonométricas

$$\sin \alpha = \frac{\text{cateto opuesto}}{\text{hipotenusa}}$$

$$\cos \alpha = \frac{\text{cateto contiguo}}{\text{hipotenusa}}$$

$$\tan \alpha = \frac{\text{cateto opuesto}}{\text{cateto contiguo}}$$

$$\tan \alpha = \frac{\sin \alpha}{\cos \alpha}$$

$$\operatorname{cosec} \alpha = \frac{1}{\sin \alpha}$$

$$\sec \alpha = \frac{1}{\cos \alpha}$$

$$\operatorname{cotg} \alpha = \frac{1}{\operatorname{tg} \alpha}$$

## Relaciones Fundamentales

$$\sin^2 \alpha + \cos^2 \alpha = 1$$

$$1 + \tan^2 \alpha = \frac{1}{\cos^2 \alpha}$$

## Relaciones Pitagóricas

$$1 + \operatorname{cotg}^2 \alpha = \operatorname{cosec}^2 \alpha$$

$$1 + \operatorname{tg}^2 \alpha = \sec^2 \alpha$$

## Relaciones entre las razones trigonométricas

### Ángulos opuestos

$$\sin(-\alpha) = -\sin \alpha$$

$$\cos(-\alpha) = \cos \alpha$$

$$\tan(-\alpha) = -\tan \alpha$$

$$\sin(360-\alpha) = -\sin \alpha$$

$$\cos(360-\alpha) = \cos \alpha$$

$$\tan(360-\alpha) = -\tan \alpha$$

### Ángulos suplementarios (180-α) y que difieren en 180 (180+α)

$$\sin(180 \mp \alpha) = \pm \sin \alpha$$

$$\cos(180 \mp \alpha) = -\cos \alpha$$

$$\tan(180 \mp \alpha) = \mp \tan \alpha$$

### Ángulos complementarios (90-α) y que difieren en 90 (90+α)

$$\sin(90 \mp \alpha) = \cos \alpha$$

$$\cos(90 \mp \alpha) = \pm \sin \alpha$$

$$\tan(90 \mp \alpha) = \frac{\pm 1}{\tan \alpha}$$

## Proyección del segmento AB sobre una recta r

$$A'B' = AB \cos \alpha$$

## Área de un triángulo

$$A = \frac{1}{2} ab \sin \alpha$$

$$A = \frac{bh}{2}$$

## Teorema de los senos (Sirve para cualquier tipo de triángulo)

$$\frac{a}{\sin \hat{A}} = \frac{b}{\sin \hat{B}} = \frac{c}{\sin \hat{C}}$$

**Nota:**  $a$  es el lado opuesto al ángulo  $A$  y así con el resto.

## Teorema de los cosenos (Sirve para cualquier tipo de triángulo)

$$a^2 = b^2 + c^2 - 2bc \cos \hat{A}$$

$$b^2 = a^2 + c^2 - 2ac \cos \hat{B}$$

$$c^2 = a^2 + b^2 - 2ab \cos \hat{C}$$

## Radián

La medida de un ángulo tal que el arco que abarca tiene la misma longitud que el radio con el que se ha trazado.

## Razones trigonométricas de suma o resta de ángulos

$$\sin(\alpha \pm \beta) = \sin \alpha \cos \beta \pm \cos \alpha \sin \beta$$

$$\cos(\alpha \pm \beta) = \cos \alpha \cos \beta \mp \sin \alpha \sin \beta$$

$$\tan(\alpha \pm \beta) = \frac{\tan \alpha \pm \tan \beta}{1 \mp \tan \alpha \tan \beta}$$

## Razones trigonométricas del ángulo doble

$$\sin(2\alpha) = 2 \sin \alpha \cos \alpha$$

$$\cos(2\alpha) = \cos^2 \alpha - \sin^2 \alpha$$

$$\tan(2\alpha) = \frac{2 \tan \alpha}{1 - \tan^2 \alpha}$$

## Razones trigonométricas del ángulo mitad

$$\sin\left(\frac{\alpha}{2}\right) = \pm \sqrt{\frac{1 - \cos \alpha}{2}}$$

$$\cos\left(\frac{\alpha}{2}\right) = \pm \sqrt{\frac{1 + \cos \alpha}{2}}$$

$$\tan\left(\frac{\alpha}{2}\right) = \pm \sqrt{\frac{1 - \cos \alpha}{1 + \cos \alpha}}$$

## Sumas y Restas de senos y cosenos

$$\sin A + \sin B = 2 \sin\left(\frac{A+B}{2}\right) \cdot \cos\left(\frac{A-B}{2}\right)$$

$$\sin A - \sin B = 2 \cos\left(\frac{A+B}{2}\right) \cdot \sin\left(\frac{A-B}{2}\right)$$

$$\cos A + \cos B = 2 \cos\left(\frac{A+B}{2}\right) \cdot \cos\left(\frac{A-B}{2}\right)$$

$$\cos A - \cos B = -2 \sin\left(\frac{A+B}{2}\right) \cdot \sin\left(\frac{A-B}{2}\right)$$

## Funciones circulares definidas en todo $R$

Recuerda que  $tg x$  no está definida en los puntos

$$x = \frac{\pi}{2} + n\pi \quad \text{donde } n \text{ es un número entero.}$$

## Valores del sen, cos y tg usuales.
