2) $\cos(3x) + \cos x = \cos(2x)$

3) $\cos^2 x + 2 \operatorname{sen} x = 2$

5) $\cos x + \sqrt{3} \operatorname{sen} x = 0$

6) $4 \operatorname{sen}\left(x - \frac{\pi}{6}\right) \cdot \cos\left(x - \frac{\pi}{6}\right) = \sqrt{3}$

7) $\cos(2x) + \operatorname{sen} x = 4 \operatorname{sen}^2 x$

10)

1) $2 \operatorname{sen} x \cos x = \operatorname{sen} x \Leftrightarrow 2 \operatorname{sen} x \cos x - \operatorname{sen} x = 0$

$\Leftrightarrow \operatorname{sen} x (2 \cos x - 1) = 0 \begin{cases} \operatorname{sen} x = 0 \\ 2 \cos x = 1 \end{cases}$

$S_1 = \{k\pi / k \in \mathbb{Z}\} = \{k \cdot 180^\circ / k \in \mathbb{Z}\}$

* Si $2 \cos x = 1 \Leftrightarrow \cos x = \frac{1}{2} \Leftrightarrow x = \left. \begin{matrix} 60^\circ, 60^\circ + 360^\circ \dots \\ -60^\circ, -60^\circ + 360^\circ \dots \end{matrix} \right\}$
(con $\operatorname{sen} x \neq 0$)

$S_2 = \{60^\circ + k360^\circ / k \in \mathbb{Z}\} \cup \{-60^\circ + k360^\circ / k \in \mathbb{Z}\}$

en radianes

$x \in \left\{ \frac{\pi}{3} + 2k\pi / k \in \mathbb{Z} \right\} \cup \left\{ -\frac{\pi}{3} + 2k\pi / k \in \mathbb{Z} \right\}$

2) $\cos 3x + \cos x = \cos 2x$

(liso, quizás demasiado para este grupo (no poner en examen) además muy largo)

Relaciones ángulos sumas y dobles

$\begin{cases} \operatorname{sen} 2\alpha = 2 \operatorname{sen} \alpha \cos \alpha \\ \cos 2\alpha = \cos^2 \alpha - \operatorname{sen}^2 \alpha \end{cases} \quad \begin{cases} \operatorname{sen}(\alpha + \beta) = \operatorname{sen} \alpha \cos \beta + \cos \alpha \operatorname{sen} \beta \\ \cos(\alpha + \beta) = \cos \alpha \cos \beta - \operatorname{sen} \alpha \operatorname{sen} \beta \end{cases}$

$\cos(3\alpha) = \cos(2\alpha + \alpha) = \cos 2\alpha \cdot \cos \alpha - \operatorname{sen} 2\alpha \operatorname{sen} \alpha =$
 $= (\cos^2 \alpha - \operatorname{sen}^2 \alpha) \cos \alpha - 2 \operatorname{sen} \alpha \cos \alpha \operatorname{sen} \alpha =$

$= \cos^3 \alpha - \operatorname{sen}^2 \alpha \cos \alpha - 2 \operatorname{sen}^2 \alpha \cos \alpha =$

$= \cos^3 \alpha - 3 \operatorname{sen}^2 \alpha \cos \alpha = \cos \alpha (\cos^2 \alpha - 3 \operatorname{sen}^2 \alpha)$

Usando esto en la igualdad del principio:

$\cos \alpha (\cos^2 \alpha - 3 \operatorname{sen}^2 \alpha) + \cos \alpha = \cos^2 \alpha - \operatorname{sen}^2 \alpha$

$\cos \alpha (\cos^2 \alpha - 3 \operatorname{sen}^2 \alpha) + \cos \alpha - \cos^2 \alpha + \operatorname{sen}^2 \alpha = 0$

$$(1) \cos^3 \alpha - 3 \cos \alpha \sin^2 \alpha + \cos \alpha - \cos^2 \alpha + \sin^2 \alpha = 0$$
